

Subtitle for The Voting Video Day-3

Eka : Good evening, my friends, thank you friends who took the time to vote for our group design tonight. Okay, just get to the topic, for Andira and Cicel are welcome to present your designs. For Andira, time and place are welcome.

Andira : So the application we are improving in this assignment is the Indonesian health quiz,

we chose this application to improve because according to our group there are several shortcomings of this application in UI and UX.

Starting from, what this is called, the main display. The display on the main page, I changed the settings part, so before that , there were three settings, such as sound, from the developer himself. It has a sound button, share, and is ad-free.

But, before that, he, before that it was the sound, then the fish and the bass,

the ad was here, so there were 4 buttons in a row, so our group thought it was not neat, the visuals were not neat.

Finally, we made a button setting to define the 3 buttons, so there was something like that, there was a voice that was shared with the settings pop-up would appear.

Now this sound can be turned off sm to turn on. It's already on, so we can turn it off.

After that, it comes back again, then there is a start button.

Well, from here on out, we changed it in the question search section, looking for this question, its initial formation was the same ... parts of the branches of the quiz category.

We think there needs to be a distinction, because it is not a branch of a category, it is a button itself to search questions, so we change it.

I designed to give a change, namely the color.

This color , why did I choose blue, because this is a health quiz and I thought from the start that the developer also chose colors related to the hospital, like green-green.

The color is not flashy but the soft one, well, in my opinion, blue is one of the colors of the people in the hospital, mainly those related to the hospital, the colors are calm.

Then after that, in this branch section, if, for example, you click on the general medicine section, from the developer itself, there were four branches, previously it was a bit to the right, and there was no arrow line, in our opinion it needs to be fixed because

He also sees visually unpleasant, then the color of the sub-branches that were previously the same as those of the branches.

Since we want some distinction, we want that user to know that these branches are part of general medicine.

How do I explain it ...

When it was opened, general medicine had another branch,

we want to distinguish its color from the main sub-branch, this is the main sub-branch; knowledge of general health, general medicine while cardiovascular is another branch of general medicine, like that ...

Then I did improvisation again in the question section, before that the question was shaped like how..

It's more or less like this, now why am I making changes to the design, because ... the changes are like this because it's tidier and looks better,

the background is the same, the background is like the options, then I also make improvements in this matter, this is a matter of the developer right,

the part marked with the letter x but in the application itself doesn't have a picture, it means it's ambiguous, isn't it clear, now I add it myself.

So, for example, if we look at something like this, then there is a picture of a question like this, it's also confused to add an image where,

it is impossible here, it is disturbing, while the image is not a small image, not an image that can be placed there. That's why I made it like this.

Then, for example, we choose Pepsin, now the correct answer will be green, previously from the developer himself if, for example, he was pressed, he came out so he moved pages, telling him whether he was right or wrong, but there was no discussion. Then what ...

The point is if it's true, if we answer trypsin it's wrong, it turns red, if for example the green and red colors themselves, in my opinion are common,

so we don't need to tell if green is right or wrong, because most people already know that green that's right and red is wrong. I also added that in the app itself there are ads at the bottom, while the ad has been displayed on the previous page in the category.

And in my opinion, ads like that are only displayed once, on one page, you don't need to be repeated many times, so I changed this part, for this to go to the next question, but I didn't frame the next question.

Then there is a question report. For example, this problem is wrong, and this is for going home. After that there was discussion, rankings, and statistics , but I didn't change the ranking for several reasons.

We will see the discussion, there was a button like that with an icon like lined paper, but it couldn't be clicked, now it seemed useless,

I finally removed it, only the home button remained. Then I changed the statistics, it wasn't like this before, what I changed was rectangle2, there were four rectangles that I changed.

Because the rectangle is not neat. This is the first rectangle slightly up, I just made it parallel. Then this total answered question was slightly to the right, then I made a line like that, so he could see it neatly.

Then the criticisms and suggestions did not have a box, only writing and I just added the box so that people know that it is a place to write criticism and suggestions. So ...

I returned to their brothers

Eka : yes thank you dira, next presentation by cicel

Cicely : Do you hear my voice?

Okay, so this is my design, actually it's almost the same as Andira's, only in this initial appearance I only change the “start” part, I add a little font, bold again a little so that it's more visible, then on the settings icon too , now in this setting icon you can click.

Now the settings pop up will appear, just like you have Andira, if you click the sound it can turn off the sound,

if we click the setting again it will return to the home section. Then continue in the discussion section, you can also click the same as with Andira,

which was previously on the left, next to the home button, there is a discussion button, but here it doesn't work, so I removed it and only had the home button.

Yes, we can go back to the home button, now we click start in the category section ..

It is wrong, back again dir

Now this is in the category section, the same is in the "search for questions" section , I changed it to be smaller so that it is different from the part of the quiz below,

but I changed it to dark blue, just to make it more visible, to make it a bit striking. If we click on the type of material, now there are examples, for example animals, then we search

In the original design, if we click search, it only appears a search notification has been successfully found 23 questions with the keyword animal,

then we click OK if in the original application, but the original questions do not appear immediately. So we were confused at first, how come only the number of keywords appears, the question is where? So here I am giving an improvisation right away,

all the questions appear at once. Okay, back to the category

Continue because this quiz section includes a sub-quiz section. In the general medicine section, sub-quizzes will appear,

here I will improvise in the sub-quiz section, minimize the button again and then put it in the middle so you know better, so that the user is easier to click, that's all if it's from me

Oh yes, then in the question section, try clicking on the cardio, the cardio section, here in the display the problem is,

I just removed the border in the problem section, the rest is the same as the previous application. That's all from me, thank you ..

Andira : yes I want to add

So I haven't told you earlier, it's actually the same, like this, it's actually the same as sisil, just too much, that's how it is

Then I returned it to their brothers

Eka : thank you dira and cicel, now welcome to vote between the andira and cicel designs starting from arip first

Arief : just live voting or comment on it first?

Eka : may comment first and then vote

Arief : maybe as a whole, this is like a quiz application in general, it's interesting from the Andira design and the cicel design, but if you can choose,

which one is more interesting, I prefer cicely because in terms of shape it's more consistent, all the borders rounded, a bit rounded, not squares,

because from the start it looks rounded like that, maybe that's because it's from me. So I voted for the design to be applied in the Indonesian health quiz application.

Eka : okay next Adin, can you go first

Adin : hary first

Eka : okay then Susilo first

Hary : okay thanks to Eka who has invited me to vote and my comments, beforehand I introduce my name Hary Susilo Pratama, I was from the C team was invited as the passerby for this group.

For the design, both are good, the analysis is also good,

and what is it ... Only for the design that from me is more of a cicel,

because if you look at the shape, judging from the color selection, and the composition seems more fitting than the side, I just said this It doesn't mean that Andira's design is not good, both are equally good.

But from myself, from my own taste I prefer sisel.

Eka : okay, thanks for the comments and the vote hary

Then you can vote and comment

Adin : Bismillah, before that, thank you for being invited to be a passerby in this voting session, please introduce my name Muhammad Adin Nugroho.

So from the design earlier, if you look at it, it is true like the words hary and arief, both of them are equally good. Maybe there are only a few that make a difference,

like earlier in the pop up section, the concept is good in my opinion, so it's simpler so it doesn't take up space on the main page. Then the question search section, if the button that looks for the question is pressed out a lot,

it is blue, that is also if I think from Andira and Cicel it's good to give it blue color. Only maybe in cicel the writing is more visible, yes, the writing,

if you think it is light blue, so the writing is not too visible. Then from the shape it fits the problem if the border is rather thin. If the sisel is a bit on the floor it is also green.

Then, for example, from the question, if you look at it, there is a back button in the upper left corner, if the system is not there, maybe there is a lack there.

So you could say that there are pluses and minuses of the two designs. But for myself, I might vote more to Sisel. Thanks before..

Cicely : thank you

Eka : So from the voting, my friends got the results. From the voting results, the design vote was Andira 0,

then the Cicel 3 design was superior here. Because the design voting has already been chosen, the design is selected,

so we will choose the cicel design to be presented to the developer later.

Thank you for friends ..
