

### **Subtitle Discussion Day-1**

Andira : Well, this is the initial view of the application that we will use or improve in the second task of the human... computer human interaction

Andira : And this is the initial view, when we open the application, it will look like this

Andira : That's all

Cicely : yes

Andira : there is a sign of music, is there also an arrow sil?

Andira : there is a sign of music, so when we open the app, it will play a music

Andira : and this is the start button

Cicely : yes

Andira : Also, there are various kind of things like buttons; discussion, ranking, and statistics

Andira : Then, if we push start, it will be switched to the different pages that contain categories of various fields of medical science that we want to work on, since this is a quiz, it will show questions, if it opened.

Cicely : yes, it contains questions

Andira : yes, this is the content of questions. If one of these is opened, there will be various options, such as general medicine, dentistry, and nursing. Well, if we open general medicine, the front view will be like this, as you can see.

Andira : well we will discuss

Cicely : do you want to discuss it from the beginning? Whether, anyone wants to improve or not

Andira: Okay then, you can do it first sil

Cicely: So, personally, I think this initial page is interesting enough and do not need to be improved more, what do you think?

Andira : I think there's a need for improvement in the "start" section, because that part.. can be made like this, so it will look like the category section, and like.. added by a shadow.

Eka : Oh, I see, the border

Andira : so the user will able to know that this is a start button, because for example if we see as it is now, it looks like an ordinary text, like there is no button to start, that all for the terms of interaction in my opinion. What about eka? Does anything need to be improved in the home page?

Eka : the start page is good enough, no need to improve it anymore

Andira : Okay, that's enough then.

Andira : What about the pictures or the colors, is the color consistency already suitable?

Cicely : maybe the font have to be bolder, make it more bold.

Andira : make it bold or give it a border

Cicely : yes, it can be bordered

Cicely : because it's too thin, isn't it?

Andira : yes, so it looks like a regular text, even though if it clicked, it will be an effect, I mean like an effect when you click a button, there will be an effect that show that it already clicked, but as we can see, it looks like less.

Andira : and for the music button I think that's okay, because if we click it, it's color will be changed, so that's okay

Cicely : so it's clear then

Eka : dir, if you can, the music, share, and shop button size should be reduced, because it is too big, I think

Andira : a bit small, huh? because it doesn't really have too much influence on the content of this app?

Eka : no, not very influence, but it looks like something odd, or it can be made like a button, or like a border then give it a 'setting' text , inserted into the settings

Andira : okay, so it will be less complicated then, because this looks already complicated

Cicely : yes it has too many characters

Eka : yes and also too colored

Andira : okay we go to the next page, so if you click that start button, the next page looks like this. There's a category and then there's a question and these are options, you want to choose what quiz, general medicine or dentistry, like that. From this look, what else do you think we have to improve more? What about sisil first?

Cicely : maybe.. in the search section of the question, in this section I think it can be made simpler, such as make the size smaller, I think it is too big, so when opened, the search section is more conspicuously instead of the part of the quizzes that want to be selected

Andira : what about eka?

Cicely : Just make it smaller

Eka : just like what cicel said, the search section is too big, if it possible, make the letters and the image of the magnifying glass transparent and the border have to be slightly minimized just a little dir

Andira : for me, I have a thought to change the color of the border, so the branches of the quiz will be green, and I want the color of the search question section not looks like the branches of the quiz. I'm afraid people will be misunderstood when they see this look, they think it is a part of the branch.

Eka : from the option, isn't it?

Cicely : branch of the quiz

Andira ; Yes, just change the color of the search section's border. Then we will be approximately the image to improve it, the size have to be reduced and replaced the border and also the border color

Cicely : yes, I think so

Andira : okey next....

Cicely : wait a second. Try to click the search section and find the material.

Andira : yes

Cicely : e.g. animals, search, then the result is only a successful search, found 23 questions with animal keywords, meaning the term is not to search for the question, but to find the number of questions that contain the keywords that we are looking for only, isn't it?

Cicely : like it doesn't fit yes, is it true?

Andira : why? I didn't hear it clearly

Cicely : it looks like it's inappropriate

Andira : it's not finding the question.. But from the number of questions is it already being explain? So it show there was a number of words, for example there are 23 words of animal, and then there were questions in those words.

Cicely : but it's only.. after the search is successful just click ok. Is that the way it is?

Andira : Wait for a moment, I will check that

Cicely : Okay, check it

Eka : Wait a second, I will take a look at it too cel

Andira : there's a question below that

Cicely : oh, it's there?

Andira : There is below that you click the question, then come out the question

Cicely : oh yes it's true

Andira : but for example like this, I think it's less efficient, isn't it? It will be better if when we look for the word animal, just go straight out the questions, do not need to be separated anymore. Is that right?

Cicely : yes, now this is separated

Andira : to be more efficient, maybe...

Cicely : just make it straight to the questions later

Andira : then, is there anymore from this page? Anything else? what about you? Sisil? Eka?

Cicely : What do you think, from the quiz branch there are more sub branches like in the general medicine section, do you think it fits that form?

Andira : how does it look? Not fitting in my opinion

Cicely : yes it looks, like less huh?

Andira : yes, it less

Cicely : well yes in that section

Andira : I think it less, I want it like it stays in the middle but the border is smaller

Cicely : well it can be like that

Andira : and the color is different, I mean the color border

Cicely : yes the color border is distinguished only by its large branches

Andira : then give it a line, so it signifies the branch of it

Cicely : yes it can be

Andira : like that

Cicely : what about your opinion eka?

Eka : what's next? That's when you press the options e.g. general health knowledge or general medicine will appear directly those options, in the section of his choices that the border should be minimized and change the color of the background so it is not green and not the same as the large, and give it a line mark or arrow to be caught this comes from the general medical option

Cicely : just like what andira said

Andira : okay

Andira : I think that's all for reaching the question

Cicely : is the game safe?

Andira : safe, but there is only part, if we open the question, it has options that dim the appearance

Cicely : oh yes true

Andira : it's not good to be like that

Cicely : the multiple choice display, isn't it?

Andira : he em, a bit blurry, like less

Cicely : oaky, we have to repaired that

Andira : then I suggest to change the color of these borders we take from the front so that it is consistent as well as the color, so not too many colors then consistent

Andira : just like that anyway

Cicely : okay, it can be

Andira : yes

Cicely : that's all

Andira : more or less like that anyway, it's enough

Andira : so many discussions at night today to improvise an application, named indonesia health quiz app, we pray that we can improvise the application more better

Cicely : thank you, I wait for the next discussion

Andira : iyaa Assalamualaikum

Eka : thank you
