

Subtitle for The Video Discussion with Developer Day-4

Andira : Assalamualaikum Mr. Haris

Mr. Haris : Waalaikumsalam, just call me “Mas”, I'm still a student too.

Andira : oh yes, Mas

Andira : First of all, we are students from Universitas Negeri Jakarta, computer science students, class of 2019. So here we get assignments from the human computer interaction course. The assignment is ordered us to find an application to improve the UI, not to improve it, but to develop the user interface and user experience

well we will introduce ourselves first. From me , my name is Andira Azzahra, people usually call me Andira.

Cicely : my name is cicely patricia, usually people call me Sisil

Eka : my name is IG ede Eka Pahlguna, usually people call me Eka

Mr. Haris : I am Haris Alwafi, I am actually a medical faculty student, now in college, I want to take an exam for November, before going to FK I was also computer science at UGM for 2 years. Therefore I can make this application.

Andira : where is your college now?

Mr. Haris : Universitas Diponegoro Medical

Mr. Haris : This application has not been updated for a long time, so that's a bit lacking.

It's your job to fix it?

Andira : yes the UI and the UX

Mr. Haris : then?

Andira : we will share the screen you improvised, Mas

All: yes, already seen

Andira : This is the application, bro. Will be explained by Sisil.

Cicely : okay so in the initial display, we changed from the text "start". Well, yesterday in the application, Mas Haris, the text "start" is a bit thin, bro. So here we are making the text a bit thicker to make it stand out more. Then in the upper right corner we add a settings icon. When clicked on this setting icon, a pop-up will appear

Mr. Haris : then what are the pop-up plans

Cicely : now this is a pop-up, bro, so the buttons in the upper left corner of the original application we entered into this setting icon

Mr. Haris : oh yeah that's great

Andira: it was here

Mr. Haris : yes, before it was above

Cicely : yes we changed the part

Andira: to make it tidier

Mr. Haris : yes so that it is more organized

Andira : yes, organized

Cicely : to make it look more simple

Andira : Then the sound if you click it to turn off then it will change color, according to the material design theory.

Andira : next, continue sil

Cicely : ok back to the initial view, then we go to the discussion section. So, in the application yesterday, in this discussion section, next to the home button, there is a discussion button, right?

Mr. Haris : right, if it's just home, right?

Cicely : When we click the button, there is no interaction, right, on the discussion button?

Mr. Haris : In the past it was on the discussion button, if it was clicked when it was in the discussion, for example, that was the number. Clicking on the discussion will return to the original discussion, so it will look like this again.

It was not interactive at first, less interactive

Mr. Haris : it only functions when you're inside, when you're discussing a problem

Andira : well here we are removing it, because it doesn't work

Mr. Haris : oh I see yes

Cicely : yes, here

Andira : Coincidentally there are also bro, if for example squeezed, but not this one. We added that the discussion was removed but an arrow was placed in the upper left corner. So the user knows it's a button to return.

If for example something like mas put it in the discussion, it's a bit ambiguous too, what button does that mean.

Mr. Haris : yes to get rid of the ambiguity

Andira: Now let's go back to the main page

Cicely : yes back to the main page. Now we click start. In this view, we change the button "search questions". In the original application, the button has the same size and color as the parts of the quiz below

Mr. Haris : yes, that's right

Cicely : So we did improvisation, changing the size of the button to be smaller and changing the color, to make it more different. So the user, you can see which button is to search for questions.

Andira : So the user knows that looking for that question

Mr. Haris : yes, good, the term is so that people know it, it's more visible

Andira : If you are looking for a question it is not a branch of the category

Cicely : to make it look different.

Then continue, click on the "search for questions" section. So, it looks like this, yes, you can try it, for example, we want to find animal keywords.

You can click "search" dir

Cicely : here we are doing improvisation, namely the questions will immediately appear. Because yesterday we also got confused. When we clicked "search", how come the notification "search was successful, found 23 questions with the keyword animal". So there we are confused, where is the question? Oh it turns out you have to double click

Mr. Haris : oh yeah the one yesterday was dropped down. So you have to click first and then appear. If this immediately raises the question, right?

Cicely : yes, we made it like this to make it more efficient, bro

Andira : makes it easy for users

Mr. Haris : yes, yesterday was a bit ambiguous, that means, people who don't know how to do it

Andira : yes so we make it easier for users

Mr. Haris : because you have to click twice

Cicely : yes, sir

Cicely : then we go to the "start" again. Click on the dir category, then we also make changes to this display, bro, in the sub-branch section of each category that has branches, we make the button size smaller and its position in the center, bro.

Yes, because yesterday it was on the right

Mr. Haris : yes on the edge

Cicely : so, if we think it needs to be changed to the middle, bro, then the color is also replaced with a lighter color than the big branches

Mr. Haris : I see yes

Cicely : yes, so to make it more visible the difference between branches and sub-branches

Mr. Haris : okey

Cicely : Then we also made changes in the question section, here we made changes, so in the question section we removed it, there is a thin border, right?

Mr. Haris : oh yeah right, so right away, right?

Cicely : yes, we removed it there, so there was no border. Direct questions

Mr. Haris : Then, in my opinion, it is too big on the button for the answer choices

Cicely : yes too big

Mr. Haris : Now it's the era of flat flats, right? The thin ones, even those that don't have any color are like white. The important thing is simple. Now is the era of simple designs. In the future, I plan to remove this, for the button.

Andira : the border is thin

Andira : That's all we are improving. we also want to ask for suggestions and criticism from the mas of the improvements we have made.

Mr. Haris : For the improven, that was it. I plan in the future to make this button simpler. It's more flat, flat icon, then the other icons haven't changed?

I think there would be a change in the icon design. Did it not change on purpose?

Andira : deliberately not changed, bro

Because according to our group, there is no need, because the UI is still good

Mr. Haris : oh like that, then I also appreciate the efficiency, right, division when pressing the search button is a very good idea. I didn't think about it at first. Then after seeing the design earlier, it looks like when you double-click it it's less efficient, it's less visible too. So when you look for it and the question immediately arises, that's good . That's the standard, yes, if mine was lacking yesterday. Then for the page at the beginning, I think it can be improved again, apart from thickening the “start” text and the settings menu.

Cicely : yes, add the settings menu

Mr. Haris : I think from there it is good

Andira : but it can still be improved like that

Mr. Haris : yes you can, or change the display model like a flat screen, so when we click a button, for example in the top left corner we click and then a menu appears.

So it looks like there is a menu button in the upper left corner, then now it's the era, maybe I can share the screen.

Cicely : yes

Mr. Haris : just a moment

This is the share screen, can it be opened?

Andira : I only made it a host, so I could share screen

Mr. Haris : well what I mean like this. So it's like this slide menu.

Andira : yes

Mr. Haris : So there is one button above it, when you click the button next to it, it will appear later. I really think there if I want to improve to a better one. The average application is now like that.

Andira : Is the icon row three?

Mr. Haris : yes row three

Mr. Haris : understand, right?

Andira : yes, understand, bro

Mr. Haris : what then? It means I evaluate the results of what you modified, right?

Andira : yes, from the discussion, whether there was criticism or not, or there were suggestions.

Mr. Haris : The criticism might be in the color section, there are green mixed with white, if what I saw earlier, it doesn't quite fit, if you see with your eyes the colors are a bit mixed. So like less flashy.

Andira : Like integrating with the background, bro?

Mr. Haris : yeah right, maybe in the future, the colors will be changed, so maybe there are alternative color solutions that are more contrasting. If we look at the contrast it will be better

Andira: is there anything else?

On the part of the problem. The problem is that was in the button option section

Mr. Haris : yes. It's good to get rid of the fine line. Because those thin lines are useless either.

Andira : So the option button is minimized, right?

Mr. Haris : I think that's all. Yes, the button for the multiple choices is minimized or maybe there is no need for a color, it's simpler.

Andira : okay. Are there enough criticisms and suggestions?

Mr. Haris : yes, that's all, in my opinion.

Mr. Haris : Is it done?

Andira : yes, all done

Previously, we would like to thank you, bro, for the availability, starting from the application, we were allowed to improve it . Then the availability of time to follow the zoom this afternoon. Maybe your friends have something to say?

Cicely : I also want to thank you, because you already want to be bothered from yesterday, we keep asking questions about your empty schedule when

Mr. Haris : oh yes it's okay

Cicely : sorry if it interferes with time bro, that's all Thank you..

Mr. Haris : yes, you're welcome

Yes, success for the task

All team M : yes, thanks Mas

Cicely : also successful in medicine, Mas

Mr. Haris : yes, I want an exam this November

Eka : Are you continuing S2?

Mr. Haris : don't know, there will be an internship, it's still a long way to go

This is for the UKMPT exam, so the application is really like the one I will run later. I want UKMPPT, doctor education competency test. I made this application when I was in the first semester of college. In semester 3-4 I made this application, then I made a plan so that I could study continuously. I can learn as well as create applications.

Andira : wow, cool
